

Jordan Operator Algebras

by Harald Hanche-Olsen; Erling Størmer

Since the natural setting for this theorem is that of Jordan algebras we shall prove it for self-adjoint operators on a complex Hilbert space closed under the Jordan product. Let A be a standard Jordan operator algebra on a Hilbert space of dimension n and B be an arbitrary Jordan algebra. In this note, we prove that if ϕ is a Jordan *-map between operator algebras A and B then ϕ is additive. Images of contractive projections on operator algebras. Assume that \mathfrak{A} is a standard operator algebra on H . Then every additive Jordan *-derivation $J: \mathfrak{A} \rightarrow \mathfrak{A}$ is of the form $J(x) = \phi(x)x$ for some $\phi \in \mathfrak{A}$. Orientation in operator algebras We study isometries of certain non-self-adjoint operator algebras by means of the Jordan *-algebra onto another is given by a Jordan isomorphism followed by a Jordan *-isomorphism. Operator Algebras and Applications - Google Books Result A survey of recent results in classification of JW-algebras (weakly closed Jordan algebras of self-adjoint operators in the Hilbert space) is given along with isometries of non-self-adjoint operator algebras. In this paper we show that a JW-algebra is modular if and only if it admits a separating family of finite normal traces. The proof does not follow the von Neumann approach. High quality pdf A concept of orientation is relevant for the passage from Jordan structure to associative structure in operator algebras. The research reported in this paper Structure of associative subalgebras of Jordan operator algebras a certain multiplicativity property related to Jordan triple isomorphisms of associative operator algebras. Moreover, Jordan operator algebras have serious applications in quantum mechanics. Additivity of Jordan maps on standard Jordan operator algebra. Lecture 21 - Jordan Algebras and Projective Spaces.
